DESCRIPTORS: \*Iron alloys, \*Castings, Desulfuriza-  
tion, Melting, Calcium compounds, Cyanamides.

The slag occurring in the desulfurization of pig iron  
with the aid of calcium salts can be eliminated more  
easily than that occurring in the desulfurization of pig  
iron with the aid of sodium salts. The desulfurizing  
activity of calcium cyanamide is somewhat inferior to  
that of calcium carbide, but it is superior to that of  
lime. However, calcium cyanamide has another merit
